

### Be #SaltSmart.

Excess salt can harm fish habitat and drinking water sources!

Salty runoff from driveways and sidewalks flows into storm drains.

Water from storm drains flows in underground pipes directly to streams and rivers.

### How can you help?

- Shovel first! Clear snow from sidewalks and driveways before it turns to ice.
- Apply salt sparingly. There should be space between the granules. Piles and clumps are wasteful!
- A 12 oz coffee mug filled with salt is enough for 500 sq ft of driveway or 10 sidewalk squares!
- Sweep up excess salt after a storm. This can be reused!
